

ANDRZEJ PRUSZYŃSKI

Senior Frontend Developer (React / Next.js)

Wrocław, Poland (Remote) | +48 664-745-489 | andrzej.pruszyński90@gmail.com | linkedin.com/in/andrzej-pruszyński

SUMMARY

Senior Frontend Developer specialising in enterprise e-commerce, with production experience across React, Next.js and TypeScript on high-traffic B2B platforms. Acted as team lead for over a year at a Fortune 500 technology distributor — owning frontend architecture, running the full Scrum cycle, and setting the state-management direction for a six-year-old codebase. Delivered business-critical work under compressed deadlines, including an order flow that secured an at-risk regional client contract. Now works in an AI-assisted development model, having designed a custom Claude Code workflow with automated verification and architecture guardrails, built to maximise output quality per token consumed.

CORE COMPETENCIES

Scalable Frontend Architecture · Enterprise E-commerce · State Management Strategy · Design Systems & Component Libraries · Technical Leadership & Mentoring · Performance Optimisation · AI-Assisted Development

TECHNICAL SKILLS

Frontend: React (incl. React Compiler), TypeScript, Next.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS

State Management: Zustand, Redux, React Query

API & Data: GraphQL, REST, Node.js, MongoDB (Studio 3T), SQL, Supabase (PostgreSQL)

Architecture: Design systems & tokens, reusable component libraries, feature flags, clean architecture, Feature-Sliced Architecture

CMS: Adobe Experience Manager (AEM)

Cloud & DevOps: Microsoft Azure (CI/CD pipelines, production deployments), Vercel, Git, GitHub Actions

Testing: Cypress, Enzyme, Jest

3D: Three.js

AI-Assisted Development: Claude Code, MCP (Playwright), Anthropic & OpenAI APIs, provider-agnostic AI service-layer design, Zod validation, documentation-driven AI guardrails

PROFESSIONAL EXPERIENCE

TD SYNnex — Senior Frontend Developer | 03/2023 – 09/2025

Fortune 500 technology distributor (~22,000 employees, US-based) · B2B e-commerce & software renewals platform · Remote, international team

Leadership

- Acted as **team lead for over a year** after the incumbent went on extended leave — without formal title — as the most senior frontend engineer on the team.
- Ran the full Scrum cycle: daily standups, sprint planning, refinement and retrospectives, with international colleagues across the US, India, Germany and Spain.
- Established a recurring weekly triage session to surface and prioritise issues buried in a six-year-old codebase.
- Onboarded multiple new frontend hires — ramping them into the platform, coordinating their assigned work with the Product Owner, and using code review deliberately as a mentoring tool.

Business impact

- Owned the **Create Order Flow** for a strategic client under a compressed deadline with an incomplete backlog — personally implementing ~80% of the flow and **retaining an at-risk client contract covering the international region**. Work recognised internally.
- Identified that the feature was not decomposed for parallel development and led the restructuring of the user-story split so multiple developers could work simultaneously.

Architecture

- Standardised **six years of inconsistent Redux and Zustand usage onto Zustand** — chosen for its smaller mental model, reduced boilerplate and faster onboarding — while retaining Redux as a documented fallback should state complexity ever justify it.
- Introduced a **reusable component library** and aligned with the UX team on **design tokens and a design system**; the resulting architecture was adopted by a second product team, with Andrzej transferred across to replicate it.

- Introduced **feature flags** to decouple frontend delivery from incomplete backend work.
- Replaced ad-hoc REST calls with **GraphQL and React Query**, eliminating redundant requests and shifting data-shaping load to the backend.
- Profiled and optimised rendering performance using Lighthouse, Core Web Vitals and the React Profiler, applying memoisation to remove redundant re-renders.

Delivery & release ownership

- Built and owned **CI/CD deployment pipelines on Azure**, managing releases to production end to end — and trained other developers to run the same process.
- Managed tasks and backlog in **Azure DevOps** alongside the Product Owner.

Adobe Experience Manager

- Became the organisation's **in-house AEM authority** after the external Adobe specialist left, having learned the platform from the ground up.
- Built AEM dialogs for the content operations team and integrated multilingual content into the frontend across APAC and Americas markets.
- Resolved AEM integration defects spanning frontend, backend and content operations.

Collaboration

- Aligned API contracts with backend engineers and solution architects, resolving data-model mismatches between layers.
- Delivered frontend feasibility feedback into the UX design team's work.

Platforms: Order Tracking (~2 years) and Renewals (~1 year) — internal staff and B2B customers.

Tech: React, Next.js, TypeScript, Zustand, Redux, React Query, GraphQL, REST, AEM, Azure, Jest, Cypress

Xentropy.ai — Frontend Developer (Freelance) | 05/2024 – 11/2024

AI-powered legal assistant startup · Concurrent with TD SYNEX; weekends only, by design

- Delivered frontend integration for an AI legal assistant serving law firms (staff Q&A and document management) and individual consumers.
- Built the product landing page and contributed the design system, design tokens and reusable component set, working directly with the team's junior designer.
- Authored the startup's foundational engineering documentation — component and frontend build standards — and helped the Product Owner define and scope tasks.
- Administered the team management system, led team meetings, and coached the junior UX designer on frontend constraints and professional development workflow.
- **Outcome:** MVP launched and was tested by two law firms and a group of individual users before the company ceased operations.

Tech: Next.js, Supabase, Vercel, Python

Stellarity — Frontend Developer | 02/2022 – 01/2023

Software house · Team: 2 frontend, 2 backend, team lead, PO

- Most experienced frontend engineer on the team; owned new feature delivery and resolved defects across a largely junior team. **Mentored two junior developers.**
- Built an **e-commerce platform with 3D product customisation** using **Three.js** for a 3D-printing client, allowing users to upload SketchUp models to communicate print requirements — and presented frontend demos directly to the client.
- Built admin and user panels for a rental platform, covering order status and payment management with light/dark theming.
- Integrated a **physical barcode/QR scanner** into the rental application workflow.
- Reworked the **GraphQL** data-fetching strategy to eliminate redundant calls as data volume grew.
- Wrote end-to-end and component tests with **Cypress** and **Enzyme**.

Tech: React, Next.js, TypeScript, Redux, GraphQL, Three.js, Cypress, Enzyme, Azure

Career Transition — Self-Directed Frontend Development — | 08/2020 – 02/2022

- Transitioned from architecture and civil engineering into frontend development through structured, mentored self-study under an experienced developer.
- Deliberately replicated a professional engineering environment — Agile/Scrum ceremonies, sprint planning, code review and deployment process — rather than isolated tutorial work.
- Designed, built and deployed multiple applications end to end and independently, including a single-page job board, owning every stage from requirements through release.

Career Break — Family Caregiving — | 09/2025 – 05/2026

Stepped back from full-time work to care for a family member; remained technically active throughout on personal projects.
Available immediately.

PROJECTS

AI Career OS — Personal Product | 07/2026 – Present

A full-stack, AI-powered job-search platform — CV parsing, job-match scoring, tailored CV and recruiter-message generation, application tracking and AI-assisted content planning. Built from zero to a deployed MVP in approximately one week of concentrated development. Currently live on Vercel in single-user mode, with subscription launch as the next milestone.

Architecture

- **Provider-agnostic AI service layer** — Anthropic and OpenAI adapters behind a single interface, isolating AI logic from the UI with Zod-validated outputs.
- **Supabase** data layer with Row Level Security and owner-scoped access, structured for multi-tenancy without a rewrite.
- **Feature-Sliced Architecture**; CI/CD via GitHub Actions (lint, type-check, test, build, deploy) on Vercel.

AI-assisted development system — designed for maximum output quality per token consumed

- Built a custom **Claude Code command pipeline**: `implement task` (plans, implements, then verifies via **Playwright MCP** against acceptance criteria in a correction loop), `review task` and `fix task`, plus commands for backlog intake with duplicate detection, milestone task generation and streamlined commits.
- Enforced **AI guardrails**: ESLint and Prettier wired directly into commands so quality gates cannot be skipped; architecture standards, component structure and best practices maintained as Markdown documentation the model must follow; a roadmap file the model reads so technical decisions stay aligned with product direction.
- Adopted the **Ponytail** YAGNI ruleset to constrain over-engineering and reduce token consumption.
- Built a persistent Markdown rules memory and an **AI starter kit** packaging the workflow for bootstrapping new applications.

Tech: Next.js, TypeScript, Supabase (PostgreSQL, Auth, RLS), Tailwind CSS, shadcn/ui, Zustand, React Query, Anthropic API, OpenAI API, GitHub Actions, Vercel, Claude Code, MCP

EDUCATION & CERTIFICATIONS

Master's Degree in Architecture and Urbanistics — Wrocław University of Technology, 2017

- Security and OWASP training with annual certification — TD SYNEX (external providers)
- LinkedIn skill assessments — React, JavaScript, HTML, CSS
- Self-directed foundations — freeCodeCamp, Udemy (HTML, CSS, JavaScript, TypeScript, React, Next.js)

LANGUAGES

Polish — native · **English** — professional working proficiency (three years in international teams at a US-based company; led Scrum ceremonies in English)
