

Andrzej Pruszyński

Senior Frontend Developer (React / Next.js)

Wrocław, Poland | +48 664-745-489 | andrzej.pruszynski90@gmail.com | linkedin.com/in/andrzej-pruszynski

SUMMARY

Senior Frontend Developer with 5+ years building React and Next.js applications, mostly in enterprise e-commerce and multi-region platforms. Focused on performance, clean architecture, and shipping business-critical features under real deadlines. Currently building an AI-powered SaaS product end-to-end — Next.js, TypeScript, Supabase — with hands-on experience integrating LLM APIs into a production architecture.

CORE COMPETENCIES

Performance Optimization • SEO Optimization (Next.js) • Scalable Frontend Architecture • Code Quality & Refactoring • Technical Leadership & Mentoring • AI-Assisted Development

TECHNICAL SKILLS

Frontend: React, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js, Supabase (PostgreSQL)

State Management: Redux, Zustand, React Query

API: REST API, GraphQL

CMS: Adobe Experience Manager (AEM)

AI Integration: Anthropic API, OpenAI API, provider-agnostic AI service-layer design

Tools: Git, npm, Yarn, Vercel, Postman, GitHub Actions

Cloud: Microsoft Azure

Testing: Cypress, Jest

PROFESSIONAL EXPERIENCE

TD Synnex — Senior Frontend Developer

03/2023 – 09/2025

- Built and shipped core frontend features for a large-scale e-commerce platform, helping the team scale delivery of new business initiatives.
- Cut page load times by roughly 30% through targeted performance work.
- Worked across APAC markets on a multi-region platform, standardizing frontend patterns so international requirements didn't need one-off fixes each time.
- Built multilingual AEM components that cut down manual work in regional content publishing.
- Set the frontend architecture and state-management approach for the multi-region app, clearing out a lot of accumulated technical debt.
- Refactored legacy modules that had been slowing the team down, fixing recurring scalability and reliability issues.
- Owned the Create Order Flow end-to-end for a strategic client — from refining requirements to implementation — business-critical work that played a real part in the client's decision to commit significant new revenue to the company.
- Tracked down and fixed AEM rendering and data-loading bottlenecks that were causing day-to-day friction for the team.
- Mentored other developers through code review, focusing on architecture and scalability thinking rather than just style — helped new hires ramp up faster too.
- Worked closely with business, backend, and frontend stakeholders in an Agile setup to keep everyone aligned.

Tech: React, Next.js, AEM, Zustand, Azure

Xentropy.ai — Frontend Developer (Freelance, concurrent with TD Synnex)

05/2024 – 11/2024

- Built an AI-powered legal assistant MVP from scratch in under two months, helping the founders validate product-market fit on a tight deadline.
- Redesigned onboarding around a chatbot-driven flow so non-technical users hit less friction getting started.
- Tuned UI responsiveness and performance early on, before scalability and usability issues could compound in a fast-growing product.
- Iterated on prompt design to make the generated legal responses noticeably more accurate and trustworthy.

Tech: Next.js, Python, Supabase, Vercel

Stellarity — Frontend Developer

02/2022 – 01/2023

- Built an e-commerce platform with 3D product customization — one of the more interactive frontend experiences I've shipped.
- Improved SEO and page performance using Next.js's built-in optimization features.
- Reworked the GraphQL data-fetching strategy to cut redundant calls, keeping things responsive as data volume grew.
- Built admin panel tooling that made it easier for internal teams to manage products at scale.

Tech: React, Next.js, Redux, GraphQL, TypeScript, Azure

Self-Employed — Frontend Developer

08/2020 – 02/2022

- Built a single-page job board application, focused on solving real performance and usability pain points.
- Delivered several other frontend projects along the way, all with an emphasis on solid architecture and performance.

Career Break — Family Caregiving

09/2025 – 05/2026

- Stepped back from full-time work to care for a family member. Stayed technically active by working on personal projects on the side.

PROJECTS

AI Career OS — Personal Project

05/2026 – Present

- Building a full-stack, AI-powered job-search platform from scratch — CV parsing, match scoring against job offers, tailored CV and recruiter-message generation, application tracking, and AI-assisted LinkedIn post planning.
- Designed a provider-agnostic AI service layer (Anthropic and OpenAI adapters behind one interface), keeping AI logic separate from the UI and validating output with Zod schemas.
- Built the data layer on Supabase with Row Level Security and owner-scoped access, structured so it can support multiple users later without a rewrite.
- Set up CI/CD with GitHub Actions — lint, type-check, test, build, deploy — and hosting on Vercel.
- Structured the codebase with Feature-Sliced Architecture and use a documentation-driven workflow with Claude Code for AI-assisted development.

Tech: Next.js, TypeScript, Supabase (PostgreSQL, Auth, RLS), Tailwind CSS, shadcn/ui, Zustand, React Query, Anthropic API, OpenAI API, GitHub Actions, Vercel

EDUCATION

Master's Degree in Architecture and Urbanistics

Wrocław University of Technology
